SERCKSPEED OIL COOLER

This oil cooler has been tested at 170psi before leaving our factory. It is made of aluminium so be careful not to overtighten the connections (max torque 16Nm for ½" BSP fittings) or cross the threads. Support the hexagon on the cooler with a spanner whilst tightening the pipe connectors.

SerckSpeed oil coolers have an unbeatable pedigree used by nearly all racing and rally teams, as well as many tough industrial applications.
